ROAD SAFETY ENGINEERING

This course provides practitioners and decision makers with the knowledge to apply road safety and safe system engineering practice.

You will learn how to manage roadside hazards, undertake crash investigations, analyse crash data and develop solutions for high-risk locations.

Course outline

- Introduction to road safety and safe system engineering practice
- The role of Victorian Police in crash reporting
- Assessment of road safety projects
- Crash site investigations and high-risk location treatments
- Site inspection, preparation and presentation of a report, including recommended treatments and benefit cost ratios
- Roadside hazard management
- Intelligent transport systems
- Introduction to safety barrier design
